

External Tester Report 001

Project Axiom

Early external prototype testing

Tester 01 - Edinburgh

This document contains feedback supplied by an external tester who used an early Project Axiom prototype in a home environment.

The tester's identity and document metadata have been removed. The responses themselves have not been rewritten. Formatting may have been adjusted only where necessary for readability and anonymisation.

Tester Feedback Survey

Thank you for taking the time to test the system.

This survey should take less than 5 minutes to complete. Honest feedback is far more valuable than positive feedback.

1. How often did you use the system during the trial?

- ☐ Multiple times a day
- ☐ About once a day
- ☒ A few times a week
- ☐ Once or twice only
- ☐ I did not use it

2. Compared to your usual food logging method, the system was:

- ☐ Much easier
- ☐ Slightly easier
- ☐ About the same
- ☒ Slightly harder
- ☐ Much harder

3. What did you use most often?

- ☐ Pre-defined tokens (specific ingredient tokens)
- ☒ Generic tokens (e.g. meat, fish, vegetables)
- ☐ Undefined item logging
- ☐ I mostly used the app

4. Have you used Recipe Tags? (Recipe tags allow multiple ingredients to be stored on a single tag.)

- ☐ Frequently
- ☐ Occasionally
- ☐ Once or twice
- ☒ No (Tried couldn't make it work)

5. Have you used Passive Logging? (For example an NFC sticker attached to a coffee jar, oil bottle, or other regularly used item.)

- ☐ Frequently
- ☐ Occasionally
- ☐ Once or twice
- ☒ No (Tried didn't work)

6. As the system exists today, would you replace your current method with it?

- ☐ Yes, completely
- ☐ Yes, for most logging
- ☐ I would use both systems
- ☒ No
- ☐ I do not currently use a food logging system

If No, what is the main reason?

Using a traditional scale is less time consuming overall,
and pre-defined recipes on the app are more intuitive to use,
but that could be biased since we've used those scales for years

7. If the system disappeared tomorrow, would you want it back?

- ☐ Definitely
- ☒ Probably
- ☐ Not sure
- ☐ Probably not
- ☐ Definitely not

8. What did you like most about the system?

The interactiveness that the NFC provide is engaging
and it provides a "game" factor to logging food making
you want to use it more.

9. What annoyed or frustrated you most about the system?

General build but that is to be expected.

10. If you could change or add ONE thing to the system, what would it be?

I would try and gage with the interactiveness of the NFCs making it more
"game" like as that was the main reason that made us use the scale more and more.

11. Would you like to continue testing for a further two weeks?

- ☐ Yes
- ☐ No – please arrange collection of the device
- ☒ No, but I would be interested in future versions

Thank you for your feedback.

Overall the scale works well but in our testing opinion it's not made to replace the traditional applications and scales as a whole. The interactiveness of the application however leave huge potential in the usage since it provides a unique experience and engagement to the scale and it's usage. Overall the normal usage of scales feels more intuitive and natural to use but that could be based on pre-defined knowledge and experience with those types of measurement equipment. The NFC ideas with pre-defined meals are good in theory but with the availability of having saved recipes that you can just click in other applications render the feature without much use.
